

I support RM-10352. In my view the FCC should adopt this Rule Making because:

1. Consistency. Rules for all HF amateur bands will follow the same general format of a narrow modes segment at the low end of the allocation.
2. Territorial Disputes. Reduce or eliminate disputes between narrow and wide mode operators at the low ends of the 1.8 mHz. allocation.
3. Recognition. Acknowledge the importance of narrow mode communications by establishing an exclusive narrow mode segment in the 1.8 mHz. allocation.
